

## PERFORMANCE IN SYNC WITH YOUR DESIGN

Designed to harmonize with your space and aesthetic, DIRT delivers its slimmest line yet. Get the benefits of manufactured construction together with a clean aesthetic and a reliable fit. It's a minimalist profile that reflects your vision.

## BUILT WITH SPEED AND PRECISION

Reflect walls are designed and built within the DIRT construction system, backed by 15 years of excellence in manufactured construction. Your vision is integrated in DIRT's proprietary software and precision manufactured before arriving on-site. And with a solution driven by technology, there are no surprise price changes.

## MAKE A SEAMLESS TRANSITION

Reflect's design enables the glass to support itself. With no need for vertical frames, you can create extended lengths of glass without obstructing line of sight. Transparent polycarbonate extrusions and mitered glass intersections create seamless corners and connections, letting light fully permeate your space.

## TAKE LOW PROFILE TO A WHOLE NEW LEVEL

Go from low profile to no profile. Combining Reflect with DIRT's access floor allows you to hide the base rail altogether. Reflect's profile is so minimal the levelling system fits below the access panels allowing a seamless connection between the glass and the floor.

## IN HARMONY WITH THE BASE BUILDING

Reflect glass walls are assembled on-site where they conform to the exact site conditions of your building. Connect to wall starts and ceiling bulkheads without the need for PVC trim. And with the ability to adjust levelling up and down, uneven floors and a slim-line wall solution can be together at last.

## BUILT IN BALANCE WITH SUSTAINABILITY STANDARD

As part of the DIRTT ecosystem, Reflect is designed in proprietary software that feeds into precise manufacturing. The process means glass can be sourced locally without the risk of incompatibility, reducing shipping costs and environmental impacts. Further, aluminum used in all DIRTT solutions contains recycled content. Your DIRTT team can work with you to evaluate applicable green building credits.

## Reflect™

### SYSTEM FEATURES

01	System extrusions are 1 3/4" (44 mm) tall and 1 1/2" (38 mm) wide
02	More than 60% thinner than DIRT™'s standard glass walls
03	Innovative levelling system works in more places with uneven floors
04	Header rail attaches directly to ceiling, soffit, bulkhead, or structure and can be embedded in DIRT™ timber or within a recessed channel
05	Ceiling connections easily attach to the bulkhead without need for PVC trim
06	Transparent polycarbonate glass connections reduce the number of vertical supports
07	Frameless pivot and sliding doors offer seamless integration
08	Easy transitions to posts, other DIRT™ walls, and base building conditions
09	Above floor and hidden base options
	Sound transmission class (STC) rating: 31 - 39
	SCS Indoor Advantage Gold certified

### Technical Overview

#### TOLERANCES

Base adjustment	+/- 1/4" (6 mm)
Ceiling adjustment	3/4" (19 mm) total
Wall start adjustment	+/- 1/4" (6 mm)

#### GLASS OPTIONS

3/8" (10 mm) or 1/2" (12 mm) glass
Clear or low-iron glass
Laminated or tempered glass
Etched or laminated finish

#### EXTRUSION FINISH OPTIONS

Clear anodized aluminum
Powder coat
Custom finishes

## Reflect™ Doors

### FEATURES

Standard frame module width 40" (1.02 m)

Variable module width available to meet clear opening requirements

Door height as required to meet performance specifications

Double door configuration available

Compatible bar pull hardware available

Supports DIRT™ and approved third-party hardware

#### Reflect Frameless Sliding Door

#### Reflect Frameless Pivot Doors

#### Reflect Mini-Rail Pivot Doors

#### Reflect Solid Core Pivot Doors
