**USE YOUR WALLS TO CREATE,  
COLLABORATE, AND COMMUNICATE**

Integrate writable surfaces directly into your walls. A more refined alternative to wall-mounted whiteboards, DIRTT writable finishes offer a seamless, modern look. Use decorative glass panels or apply a writable surface directly to durable MDF. Whether you need an easily cleanable surface for tracking patient progress in a hospital room or a way to make brainstorming more productive, DIRTT writable surfaces offer elegant functionality.

## INCREASED FUNCTIONALITY

Make the absolute most of your building. A wall doesn't just have to separate one room from another. Creating stunning spaces with writable surfaces encourages increased collaboration. Design a room to brainstorm ideas and build community among your team members. As creativity flows, productivity increases. DIRTT writable surfaces can unlock the full potential of your space.

## SEAMLESS INTEGRATION

More elegant than a whiteboard hanging off a wall, DIRTT's writable surfaces are integrated seamlessly into your space. Convert your solid walls with WriteAway film in custom colors. Use durable Corning® Willow® Glass to create stunning graphics with writable capability. Turn your entire wall into a canvas with purpose and passion.

## EASY TO CLEAN

The DIRTT Construction System uses high-quality materials that are built to last. That means they stand up to cleaning over time. Anti-ghosting anti-microbial finishes keep your space looking clean while durable materials allow you to clean high-touch surfaces frequently without losing that just-moved-in look.
