

TRITONTECH

**TOUCH ENABLE YOUR
DIRTT MEDIA WALL**

Touch Technology for Business

Turn any screen into a touch screen

Luckily, investing in touch-screen technology is more streamlined and effective than it used to be. Today, any DIRT prefab wall with an embedded TV can become a multi-touch surface using PCAP touch technology.

Touch enable your DIRT installation with a high performance through glass touch sensor. Applied to the rear of the DIRT glass, it provides a responsive and accurate touch experience.

Using the same principle as you and your users are used to on a daily basis with your smartphone, TRITON TECH, using DISPLAX's through glass technology allows you to introduce interactive experiences with your DIRT installations.

Take any existing or new DIRT embedded display and turn that into a touch screen

Authorized installer to help you laminate the DISPLAX FILM and tune/calibrate the unit

The dimensions of the opening or clear portion of the DIRT glass is all we need

Plug & Play Windows 10 and i7 processor is preferred, but not necessary

For more than 6 years TRITON TECH has been providing best in class touch capability to DIRT customers across the USA and Canada.

Object Recognition

High Resolution

Applications

Interactive Training Rooms

Across its many applications, touch screen technology has been most effective as a learning tool. By making your fingers the mouse, touchscreen interfaces have been shown to reduce training time for employees.

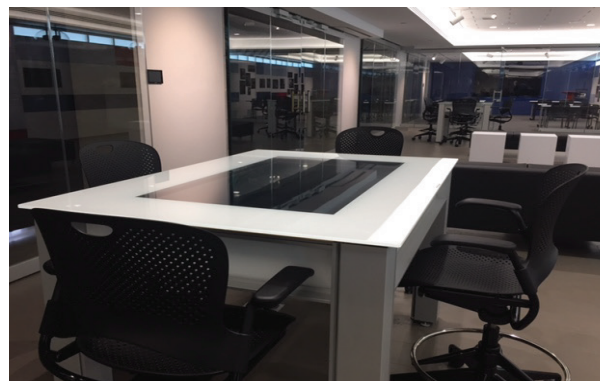

Retail + Self-Service

This type of installation allows visitors to check-in at kiosks when they arrive, communicate via touch screen monitors while they are meeting with staff or use it at “self-help” stations within the facility.

Board Rooms

From daily meetings and collaboration to client presentations and web conferences, your boardroom serves a variety of roles in your office. The touchscreen is a very responsive and useful way for you to stand next to your presentation and interact with it physically.

Multitouch Tables + OR

Allows you to transform touch screen monitors to create highly performing and innovative Multitouch Tables, allowing Object Recognition. They are the ideal solution for interactive experiences, retail, museums, hotels and many others.
