

# DIRTT Sustainable Decommissioning + Recovery Pilot Program

DIRTT is a multi-trade, prefabricated, modular construction system with the ability to evolve and adapt over time. We recommend our solutions be continually reconfigured to support business needs and sustainability goals. When reconfiguration isn't possible, DIRTT wants to help make the best financial, social, and environmental considerations during the end-of-life process.

This is why DIRTT recommends **CSR Eco Solutions** for end-of-life decommissioning and recovery of our products. With their global-recovery program, CSR Eco Solutions outlines a path for clients to reach proper end-of-life management of these assets. At the same time, they deliver transparent reporting and a clear auditable line of sight for end-of-life management.

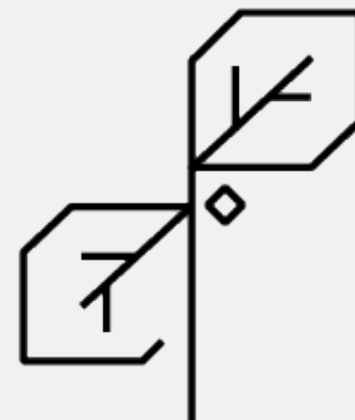

## Benefits

One-stop decommissioning for end-of-life management.

Extracting value from decommissioned asset.

Minimizing end-of-life environmental impact.

## CSR Eco Solutions Recovery Process

1

### INITIATE

Identify client goals and present strategic options.

2

### PLANNING

Identify key milestones and contacts, ensure all contracts are in place.

3

### EXECUTE

Dispatch service providers to complete the work in the scheduled timeline.

4

### CLOSEOUT

Provide detailed invoicing, reporting and metrics, tax receipts, and any money recovered from the end-of-life process.
