

ASP Access Floors

Build from the Ground Up

Access Flooring Solutions for Commercial Interiors

A Foundation for Adaptable Interiors

Access flooring creates a level foundation while providing convenient access to underfloor systems. It simplifies maintenance, supports future modifications, and helps reduce disruption as spaces evolve.

The Right System for Every Project

Design priorities, infrastructure requirements, finish selections, and performance expectations vary from space to space. Rather than offering a one-size-fits-all approach, the ASP Access Floors portfolio includes three systems developed to support different applications and project requirements.

Three Systems. One Portfolio.

Icon Data Vinyl

Designed for environments requiring permanent antistatic performance with 100% underfloor accessibility

Icon X

Designed for commercial environments where efficient power and data cable management is a priority

Urban Interlock

Designed for projects incorporating stone and tile finishes with an interlocking edge profile that eliminates panel movement

Technical Comparison

	Icon Data Vinyl	Icon X	Urban Interlock
CONSTRUCTION	Icon panel with anti-static vinyl layer	Steel panel with structural cementitious core	Calcium sulphate panel with galvanized steel base plate and interlocking edge profile
TYPICAL APPLICATIONS	Data centers, communication rooms, and other ESD applications	Commercial offices, banks, learning institutions, and libraries	Projects incorporating stone and tile finishes, including lift lobbies, amenities, and foyers
PERFORMANCE HIGHLIGHT	Permanent antistatic properties with 100% underfloor accessibility	Supports efficient power and data cable management	Interlocking edge profile designed to eliminate panel movement

Key Access Floor Features

Built for Long-Term Performance

Designed to provide durable access flooring solutions across a variety of commercial environments

Simplified Access

Removable panels provide convenient access to underfloor systems for maintenance, upgrades, and future modifications

Supporting Sustainable Design

Reduced environmental impact and recycled content support sustainable project goals
